

What does Tetra Cool Peel CO2 laser treat?

The Tetra CoolPeel CO2 Laser is a type of “fractional resurfacing” laser which removes very thin columns of skin while leaving the surrounding tissue intact. This process uses heat energy and triggers collagen production, which can dramatically improve skin texture, reduce fine lines, and clear up the skin’s complexion.

This laser can improve:

- Wrinkles, from fine lines to deep creases
- Pigmentation problems including age spots, and sunspots
- Redness
- Acne scars
- Sun damage
- Thinning or crepey skin
- Skin laxity
- Under-eye circles and bags
- Dull skin

Is there downtime with a Cool Peel Treatment?

Most people are a bit red the day after the procedure. The next day the skin may be pink and make-up can be worn 24-48 hours after the procedure.
